

# CODR - CODE DISCUSSION & REVIEW

CoDR is a tool which provides a platform for students to upload and discuss code for different modules, courses and exercises. CoDR allows students to create project groups and work together, encouraging discussion to increase the quality of code written by novice programmers. In addition, CoDR has a powerful rights management system which allows administrators to create different right groups for every possible scenario imaginable: peer review, exams - you name it, it's possible with CoDR.

## PROBLEM STATEMENT

Currently the students' only way to ask for help is during the assigned hours, or outside of the assigned hours on Slack or Blackboard. The main issue with Slack or Blackboard is that to discuss your code you have to ask the question separately from the code copy or screenshot. This makes it hard to clearly indicate what you are talking about, as it is not possible to attach comments to specific lines of the code. CoDR is designed to fix this problem.
